CWB – GFS

System configuration

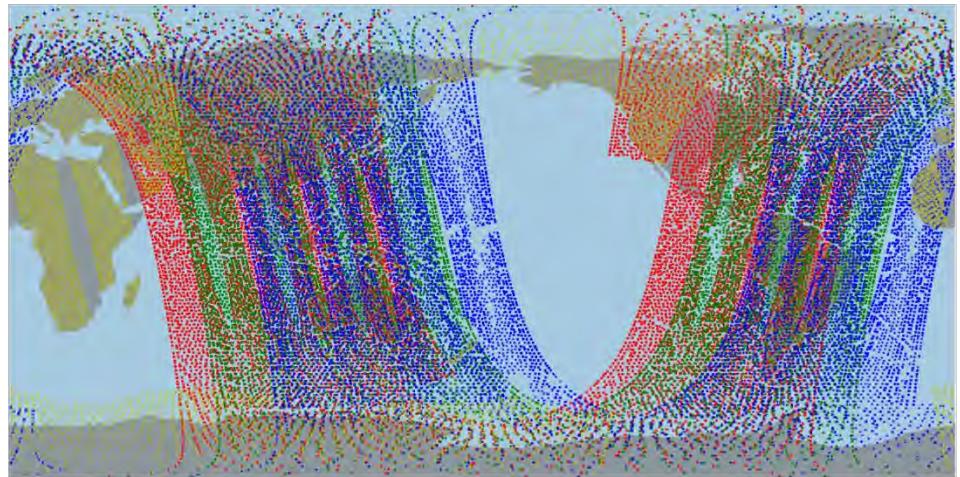

Variational Data Assimilation	GSI Hybrid 3D-EnVar (Wang, 2010 ; Kleist 2016)
Ensemble Data Assimilation	EnSRF (Jeff Whitaker, 2002)
Resolution	T511L60 (~25km)
Ens. Resolution	T319L60 (~40km)
Beta Static Weights	0.25
Beta Ensemble Weights	0.75
Ensemble Member size	72 (36 EnKF + 36 Time lagging)
Additive Inflation	NMC Method
Recentering	Yes
TC and EC bogus data	Yes
Observations from	NCEP and GTS
Horizontal localization	800 km

GSI更新說明

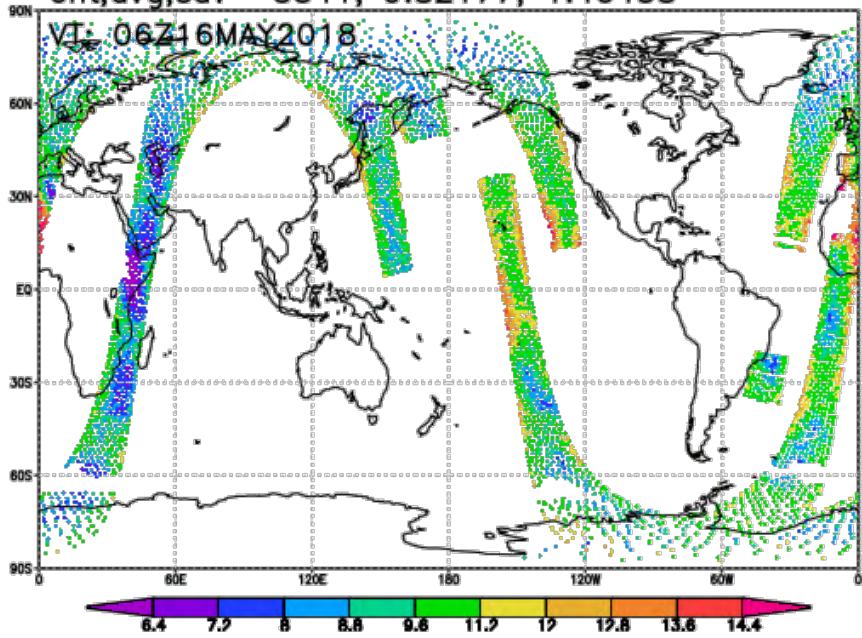

- 目前作業之GSI為NCEP 2012年上線之版本
- 預計上線之GSI為2015年(NCEP EMC trunk r55323) 版本
- 更新說明
 - 2012年
 - Suomi NPP衛星搭載之CrIS
 - METOP-B衛星搭載之MHS、AMSU-A
 - 2015年
 - 程式優化
 - EnKF系統部分更新
 - 飛機溫度觀測資料做偏差校正
 - 雲導風資料(GOES、EUMESAT衛星)
 - METOP-B衛星搭載之GPSRO
- CRTM LIB 更新，由CRTM2.0.5更新至2.2.3
- BUFR LIB 更新，新版本修正BUFR讀取問題
- 更新可讀取COSMIC-2 QC-FLAG

GSI更新說明(續)

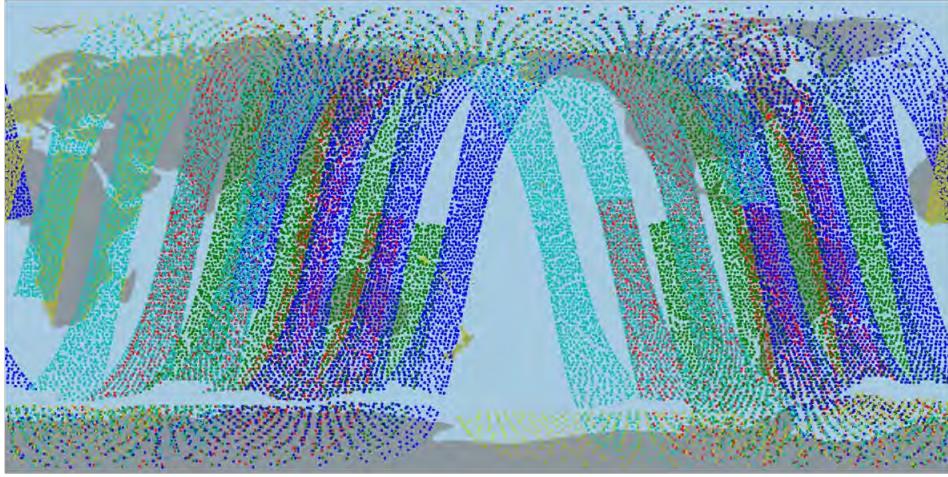

2018051312 AMSU-A Assimilated

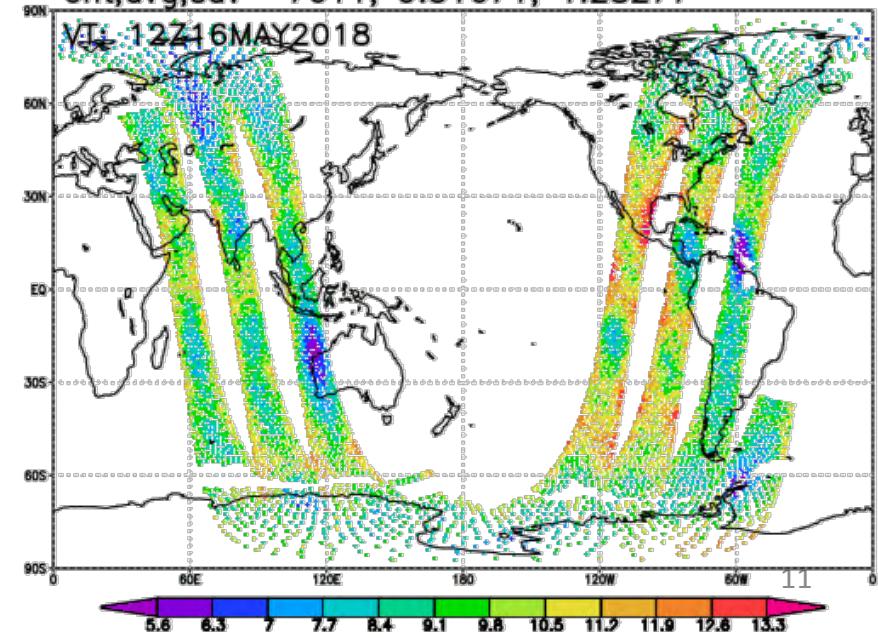

platform: amsua n15
variable: channel 13 ges_(w/o bias cor) - obs (K)
cnt,avg,sdv= 5541, 9.82177, 1.40458

2018052000 AMSU-A Assimilated

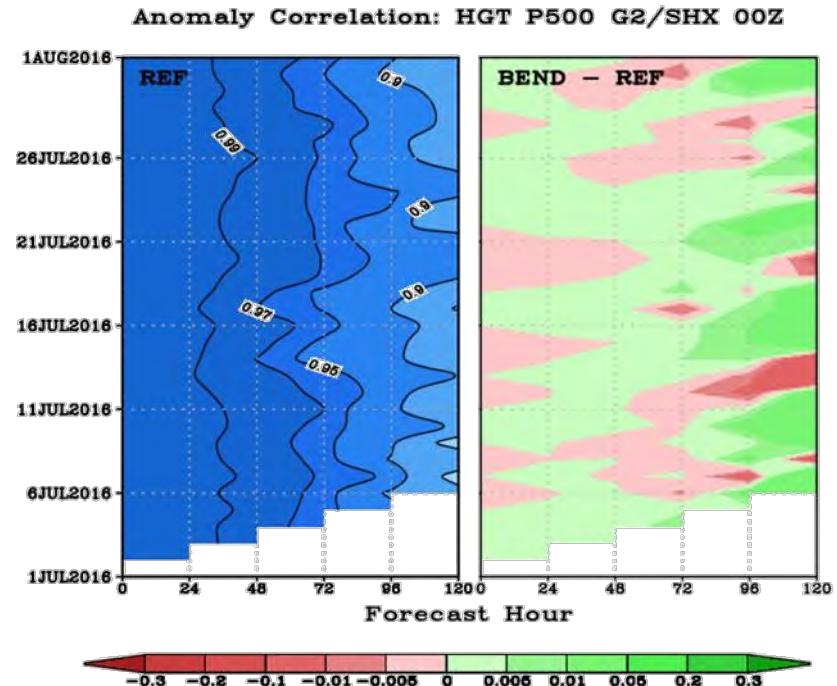

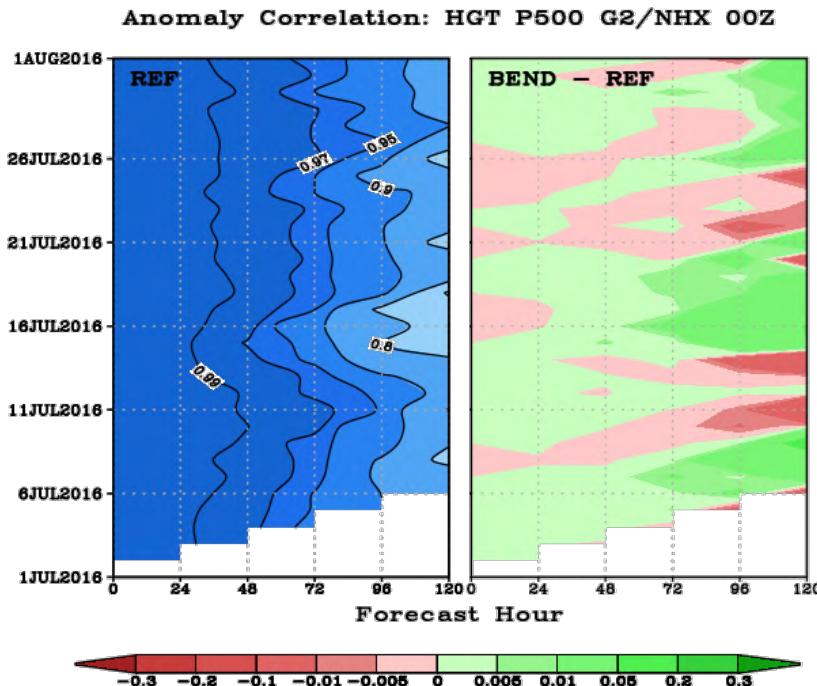

frequency: 57.29 GHz
wavelength: 5232.86 μm
cnt,avg,sdv= 7611, 9.51671, 1.28277

Experiment Design - GPSRO

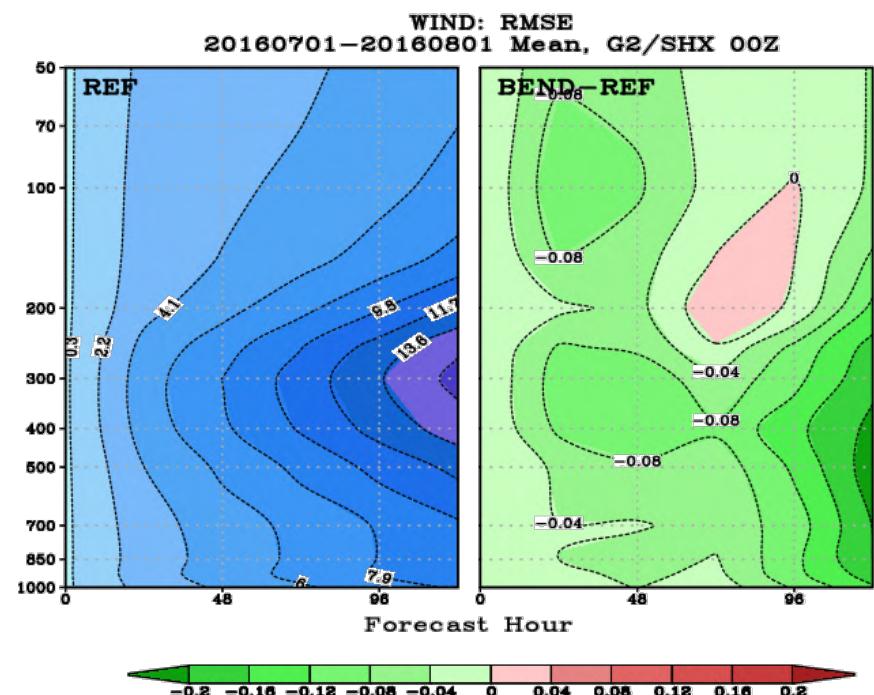

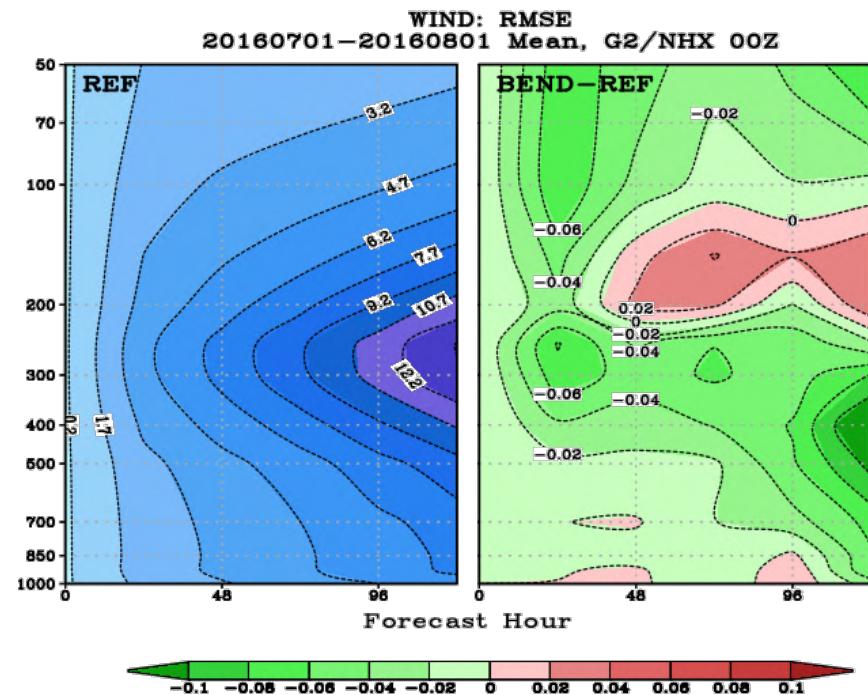

Resolution	T511L60 (~25km)
Ens. Resolution	T319L60 (~40km)
Beta Static Weights	0.25
Beta Ensemble Weights	0.75
Ensemble Member size	36
Additive Inflation	NMC Method
Re-centering	Yes
TC and EC bogus data	Yes
Observations from	NCEP and GTS
Horizontal localization	800 km
RO data type	Bending angle
Experiment period	2016 7/1 – 7/31

500 hPa AC of Height

ScoreCard

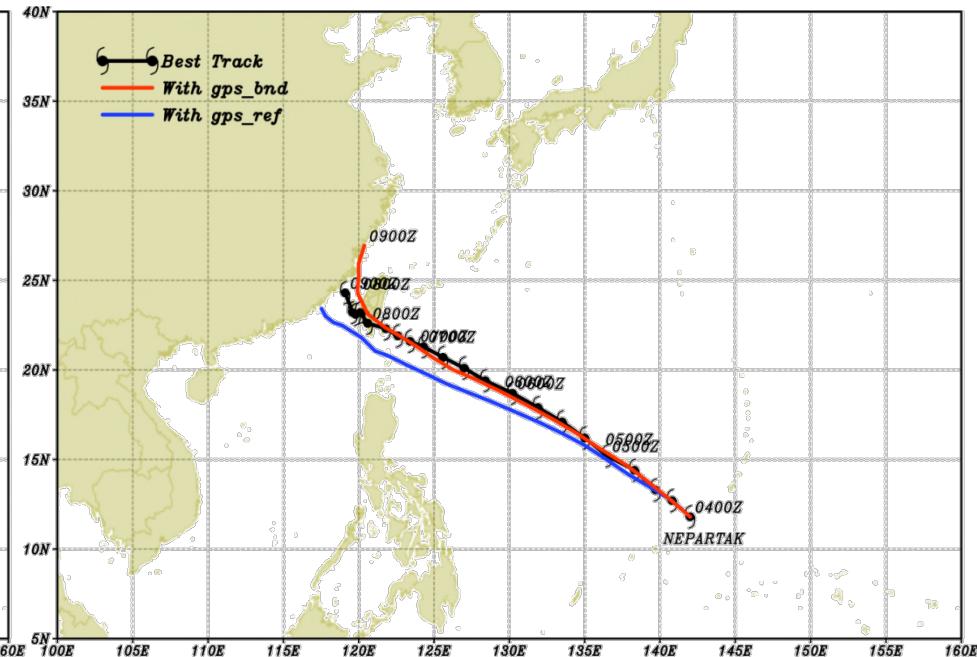

Typhoon track - NEPARTAK

CWB GFS for Typhoon-track
Initial time = 16070300

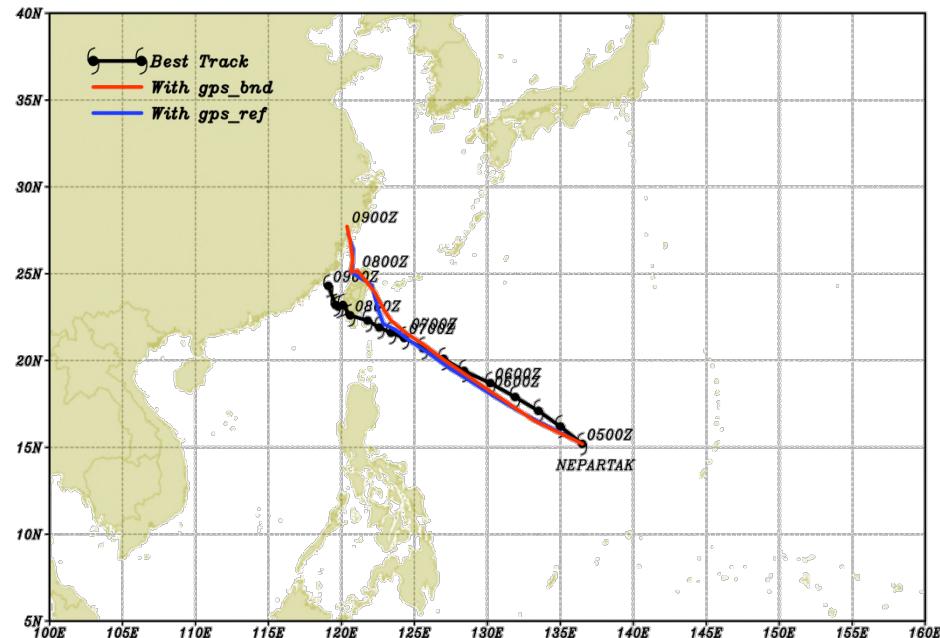

CWB GFS for Typhoon-track
Initial time = 16070400

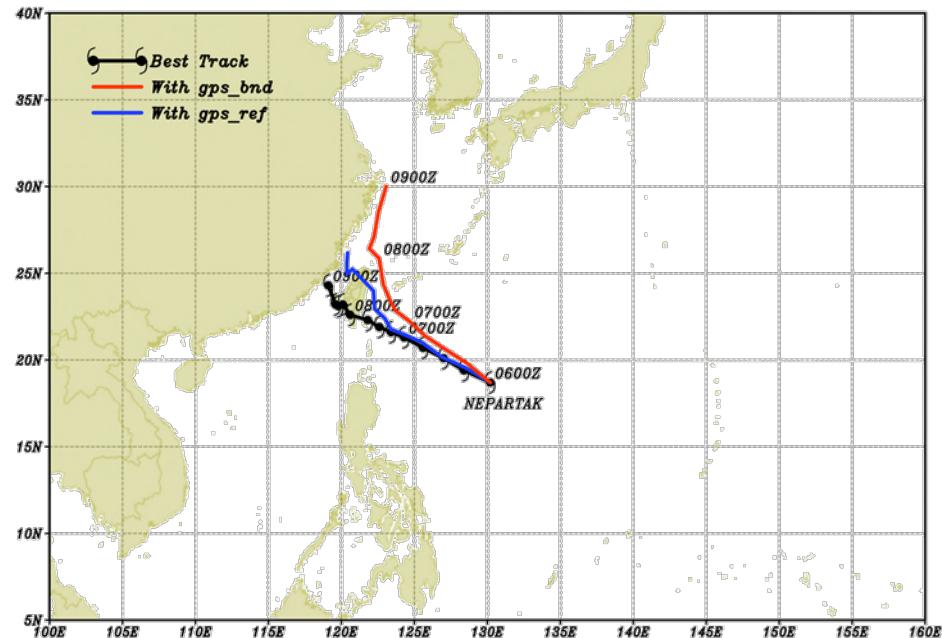

Typhoon track

CWB GFS for Typhoon-track
Initial time = 16070500

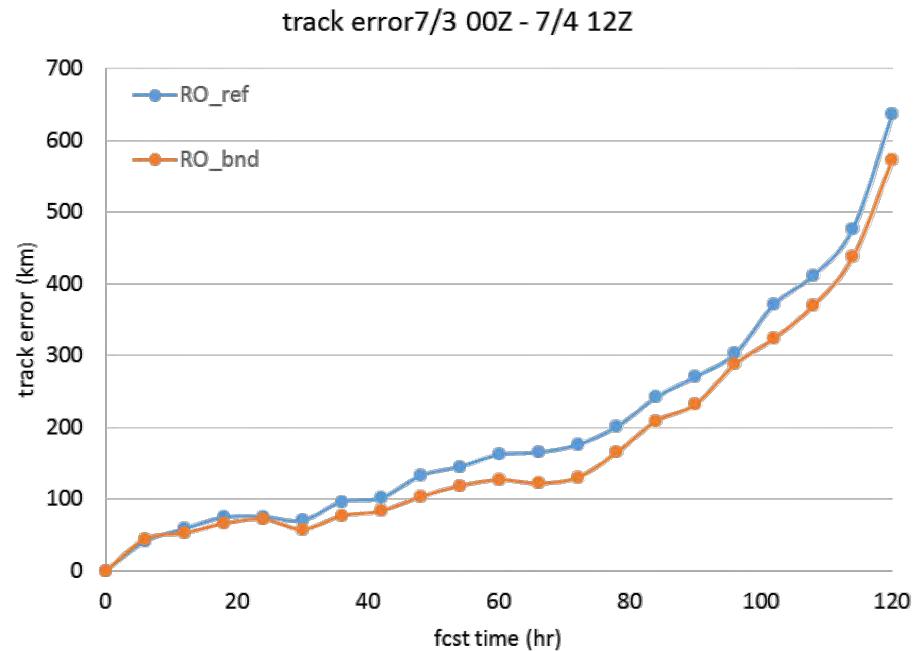

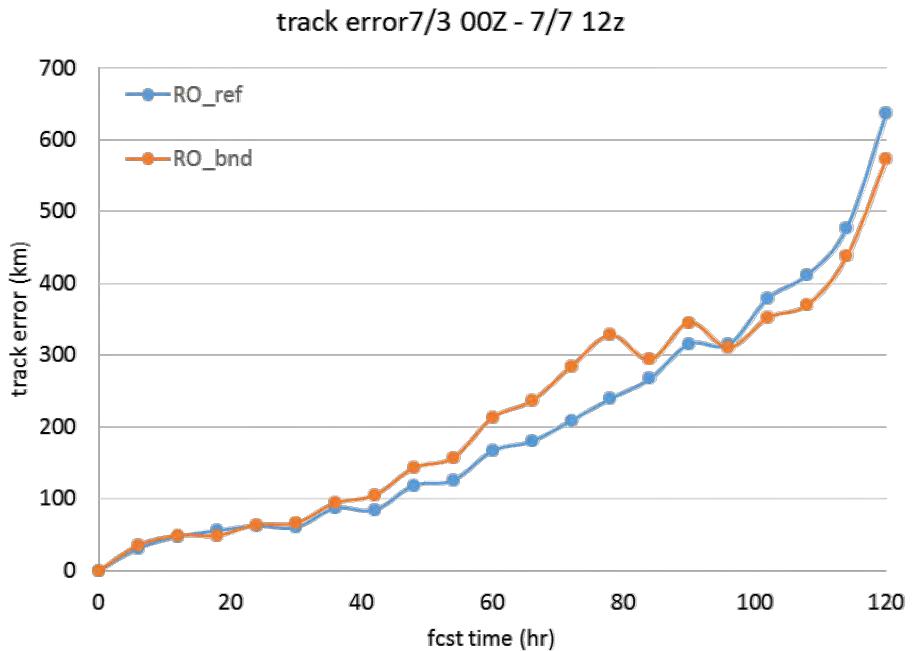

Central pressure 970mb

CWB GFS for Typhoon-track
Initial time = 16070600

Central pressure 915mb

Typhoon track error

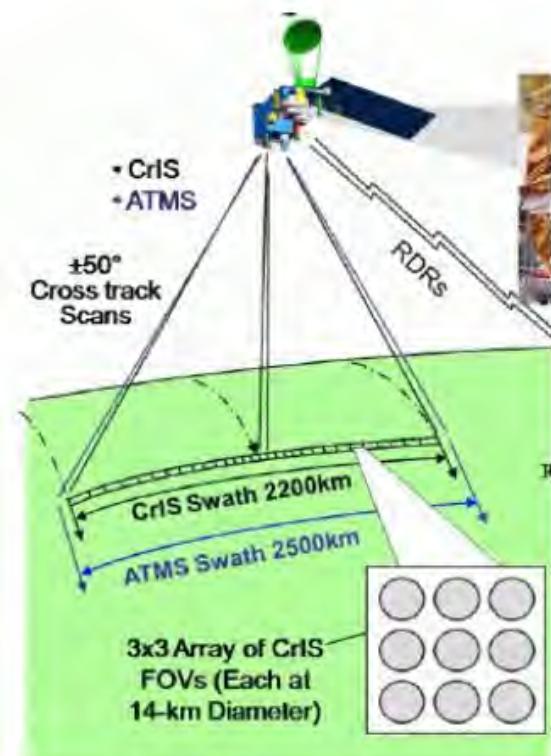

Radiance 資料使用說明

- CrIS – Cross Track Infared sounder
- HIRS4 - High Resolution Infrared Radiation Sounder
- MHS - The Microwave Humidity Sounder

CrIS assimilation at CWBGFS

(CrIS) : Cross-Track Infared sounder

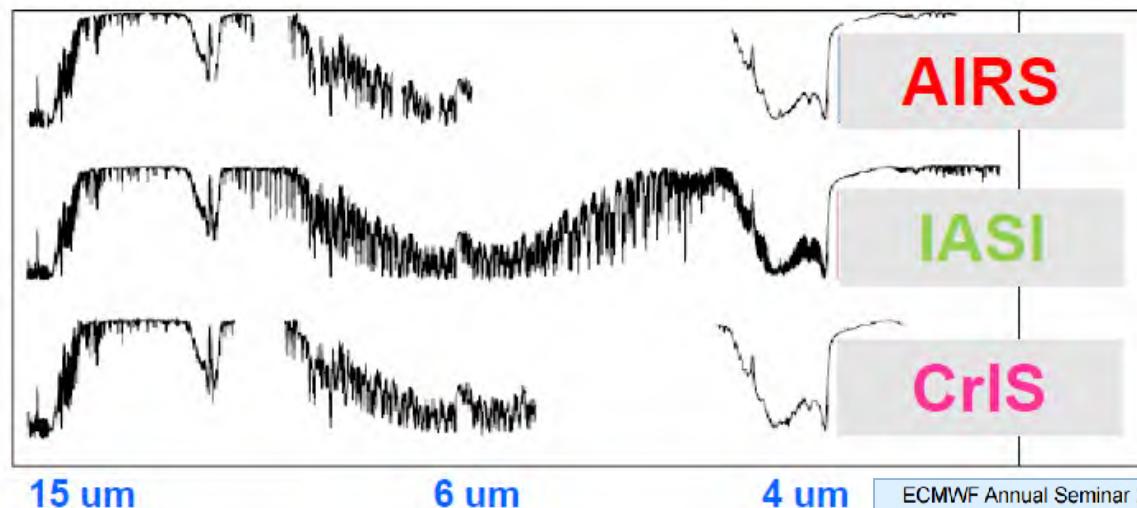

- flying on Soumi NPP satellite (2011.10 launched)
- +/- 50° from the nadir
- Width of swath : 2200km
- 30 earth scene fields-of-regard(FOR)
- 3X3 FOVs/FOR with 14km at nadir
- 1305 channels =
 - channel 1-713 long wavelength IR(9.14-15.38μm) +
 - channel 714-1142 middle wavelength IR(5.71-8.26μm) +
 - channel 1143-1305 short wavelength IR(3.92-4.64μm)
- 提供涵蓋全球高垂直解析度溫度、溼度剖面觀測：
對流層垂直解析度 1-2km 、平流層 3-4km 。

HIRS 19

ECMWF assimilate 177 CrIS channels since 2016/11 (instead of 77 channels)
NCEP assimilate 82 CrIS channels

CrIS輻射資料的同化

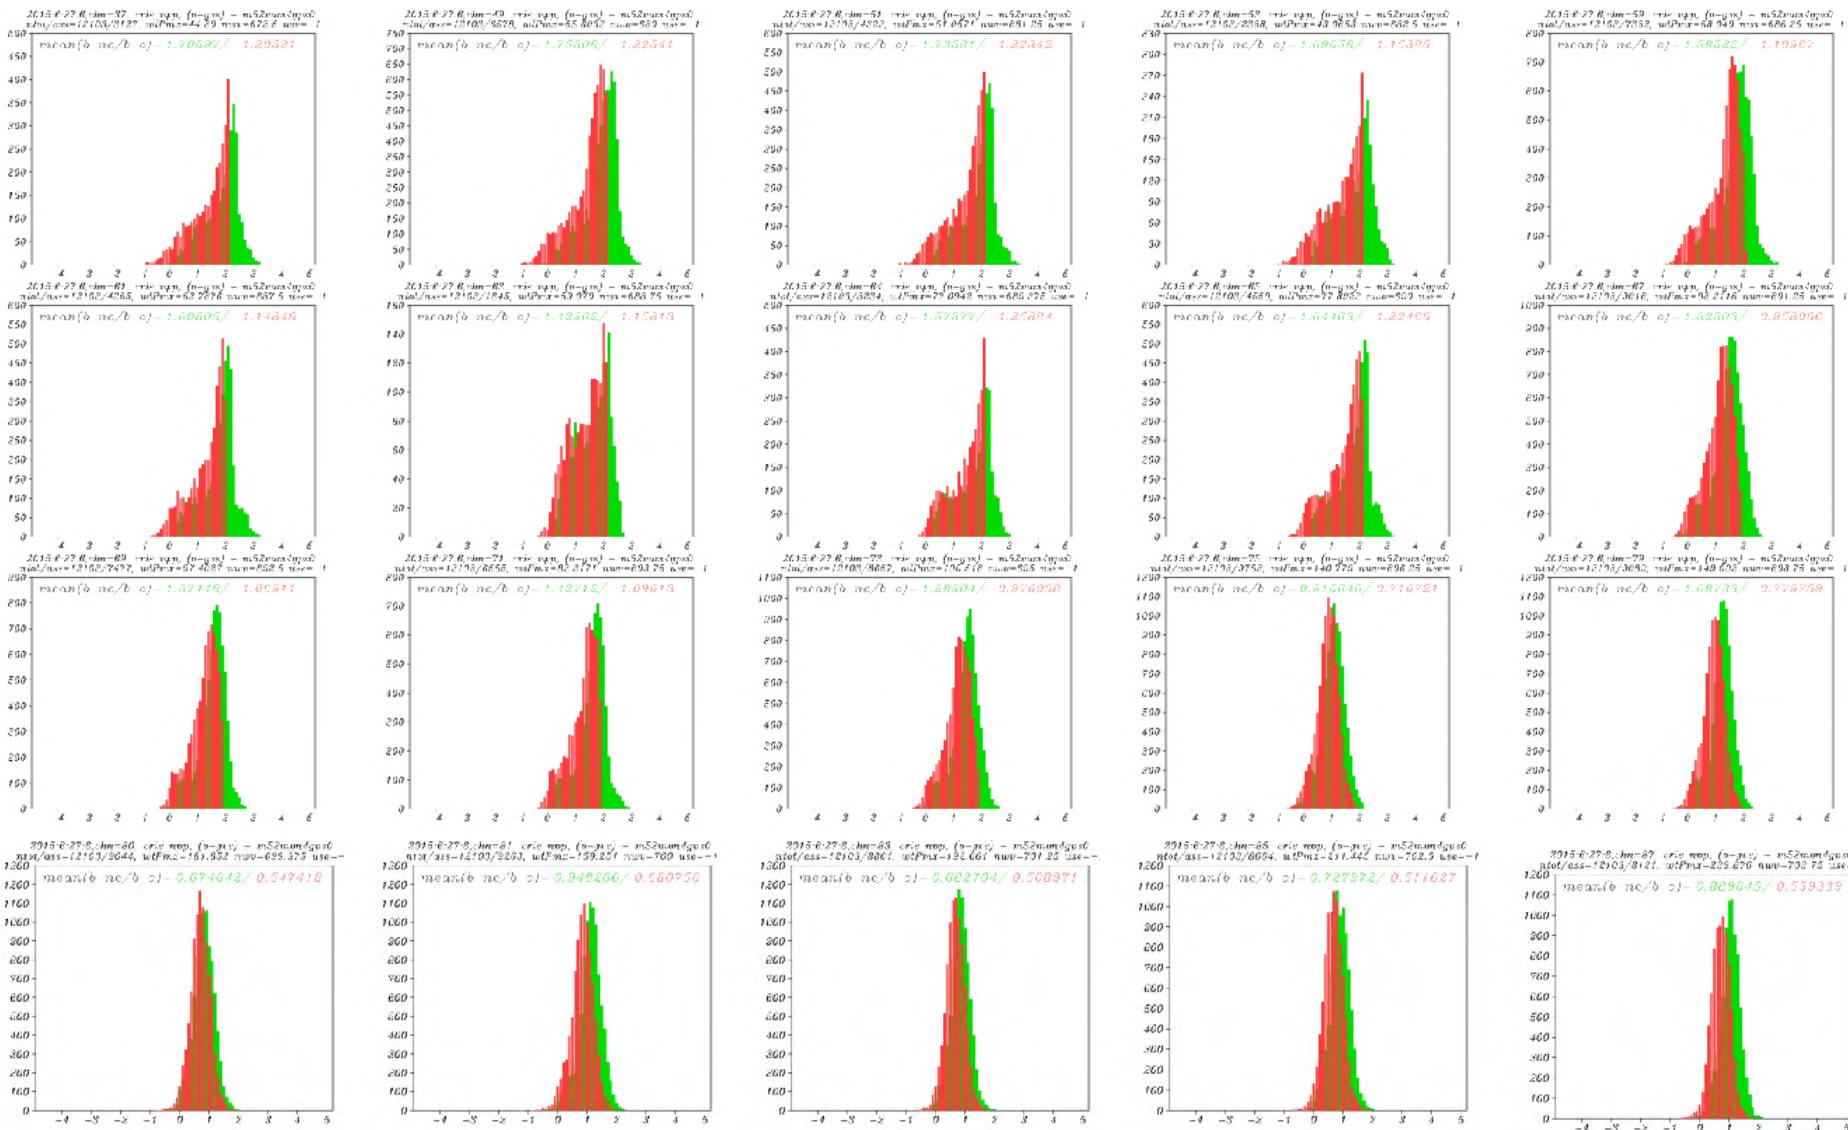

需要背景場的溫度、濕度、臭氧及地面特性資料，資料的同化與模式的特性密切相關

(O-B)含觀測誤差、背景場誤差及觀測運算子的誤差

觀測偏差及觀測運算子偏差校正(掃描角及氣團校正)→背景場偏差明顯時會影響偏差校正的效果

15062706 , T_b (O-B) v.s. obs count each bin - I

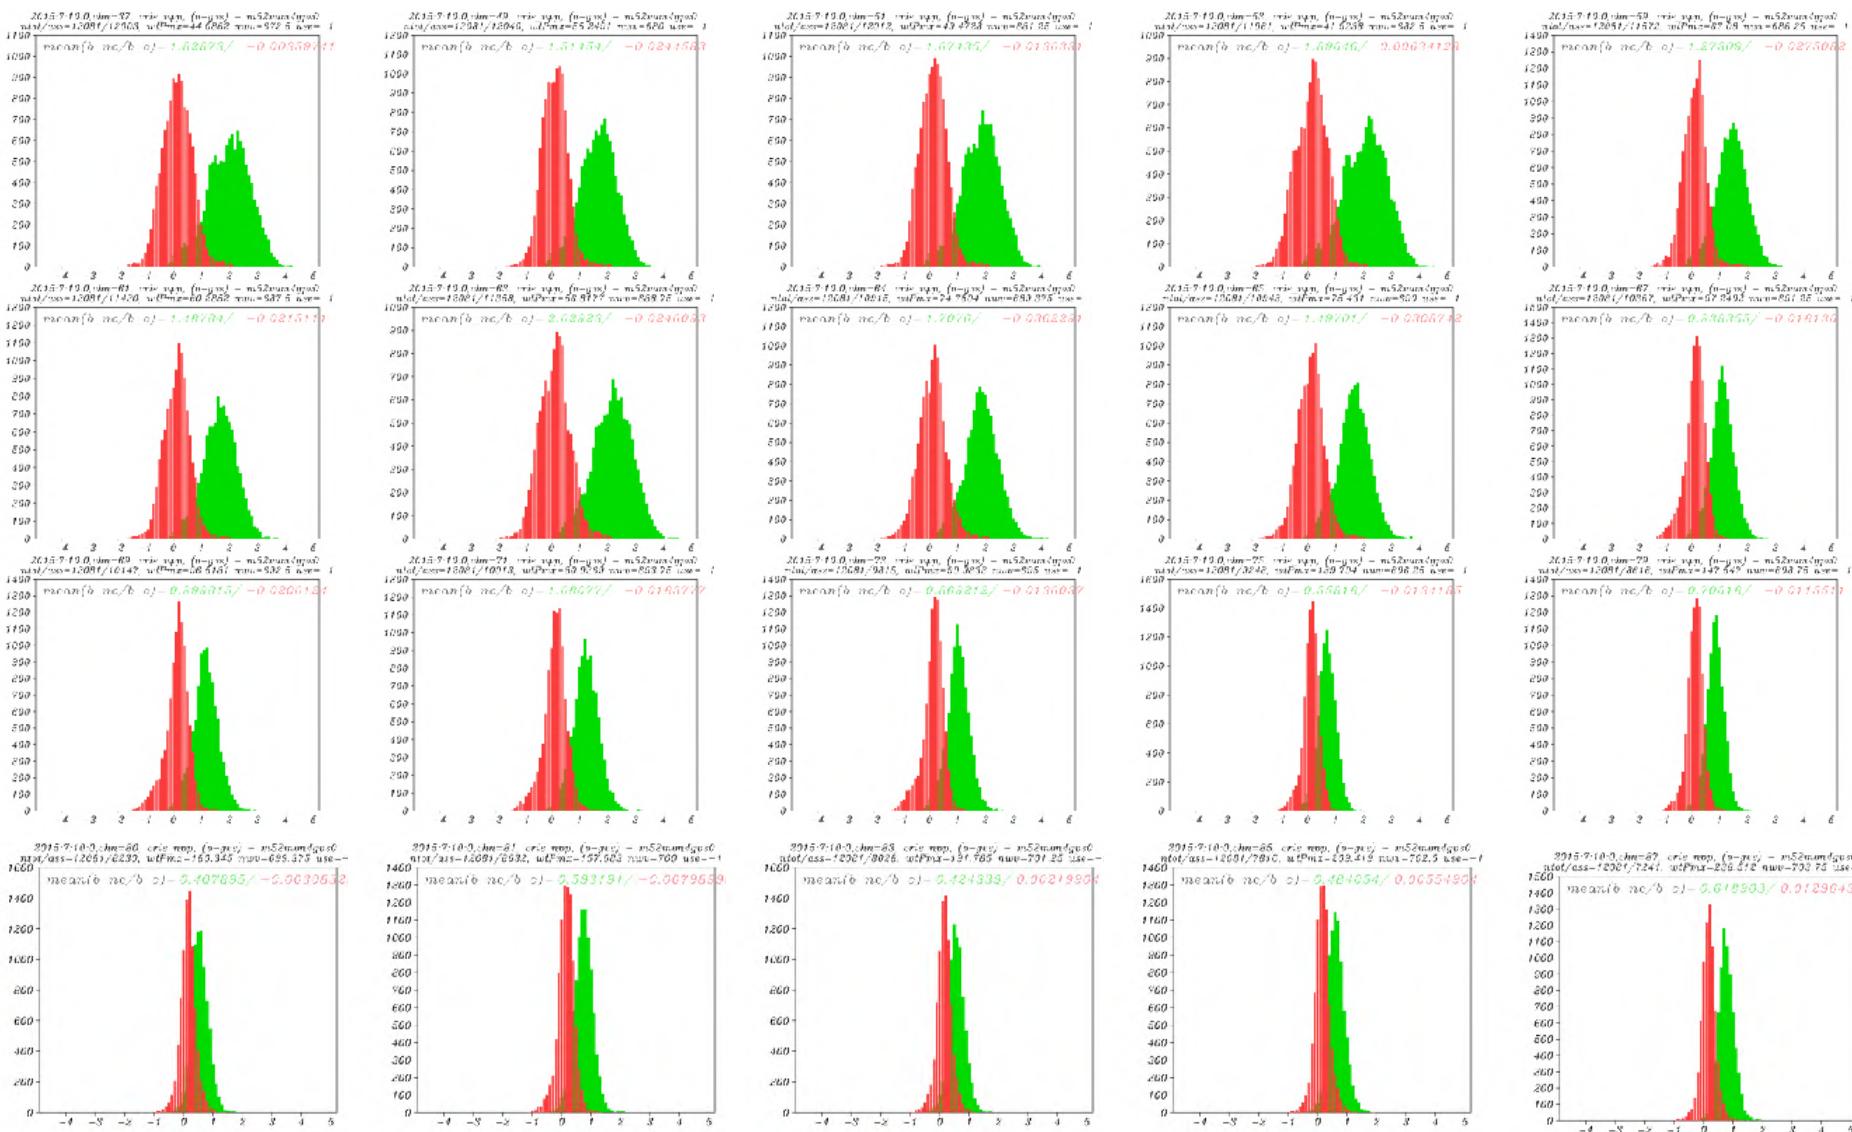

start from 15062700
Bin from -5 ~ 5 with interval=0.1

Not Gaussian distribution for some channels at 1'st run

Wen-Mei Chen

15071000 , T_b (O-B) v.s. obs count each bin - I

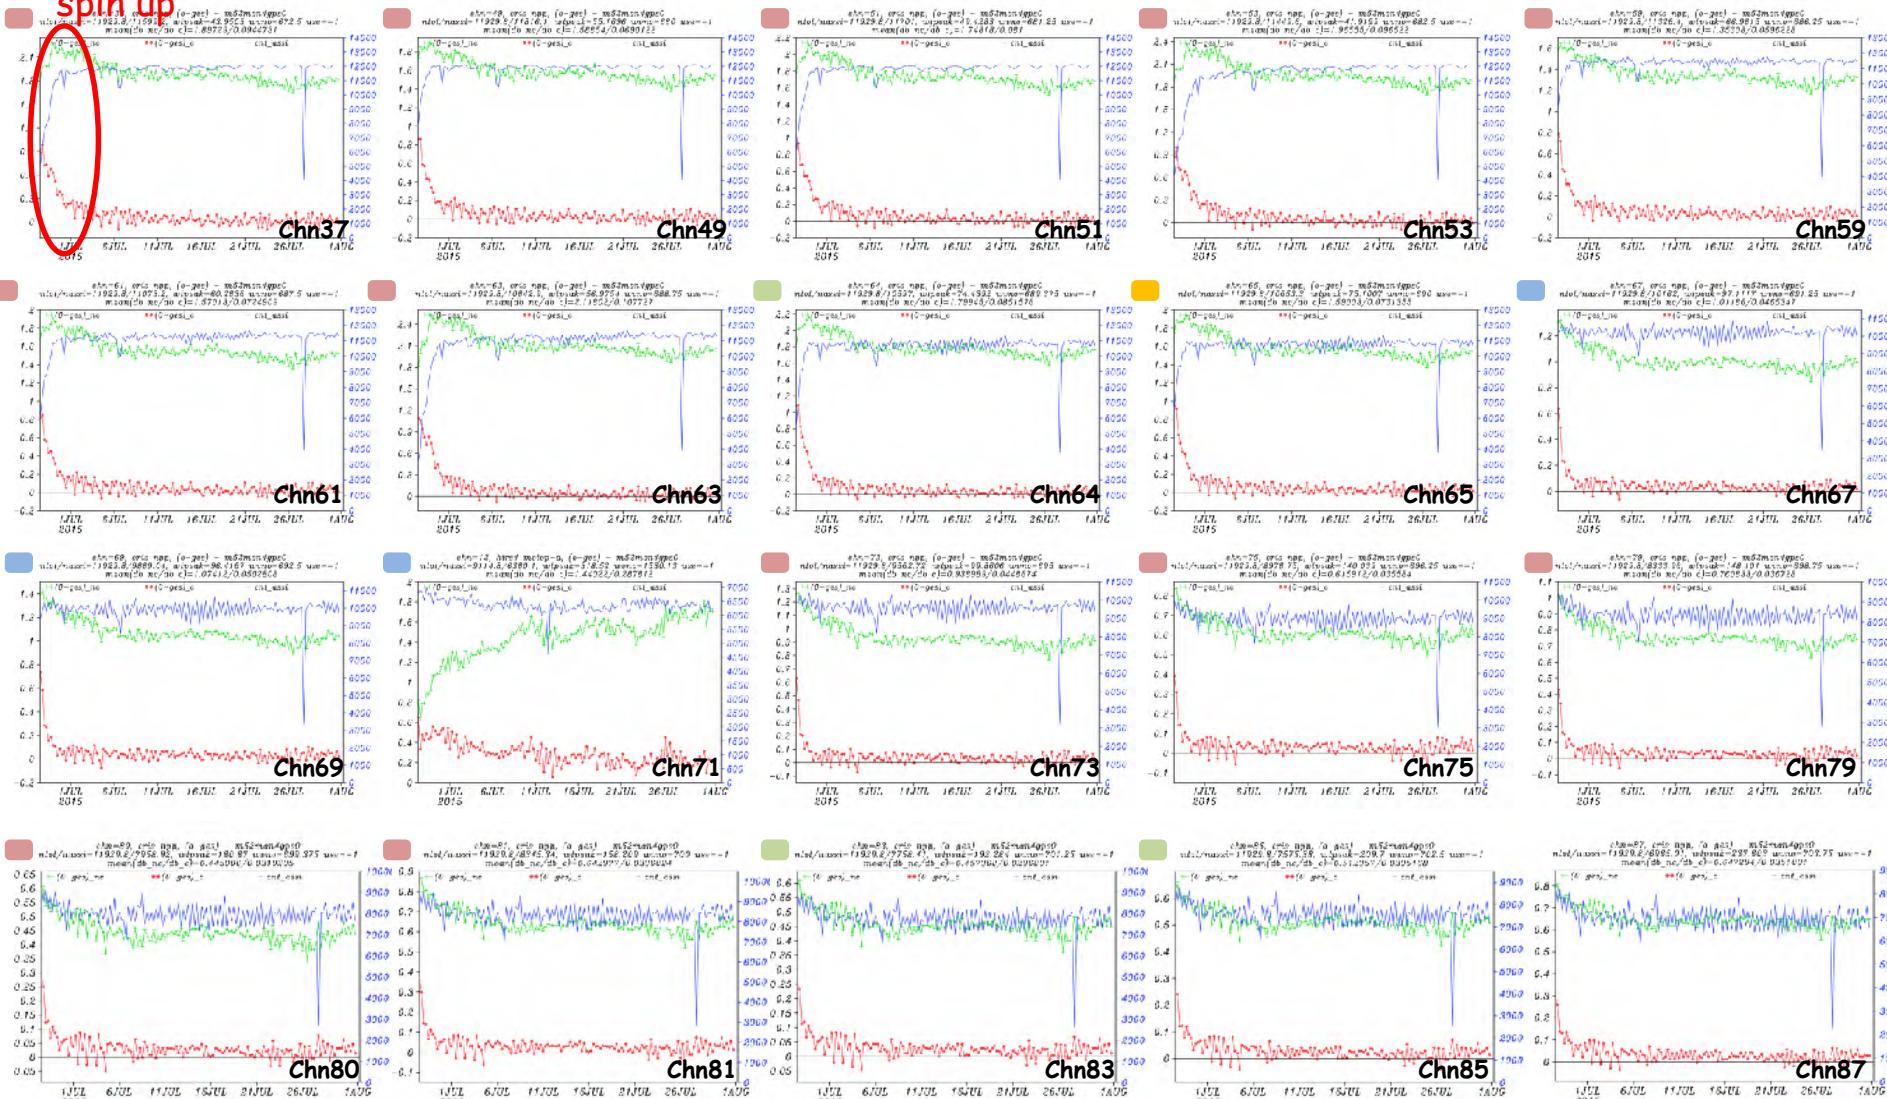

start from 15062700
Bin from -5 ~ 5 with interval=0.1

Gaussian distribution for all channels after 13-day update cycle
Wen-Mei Chen

CrIS_npp : (O-B)_nc v.s. (O-B)_c v.s. assimilated count - I

spin up

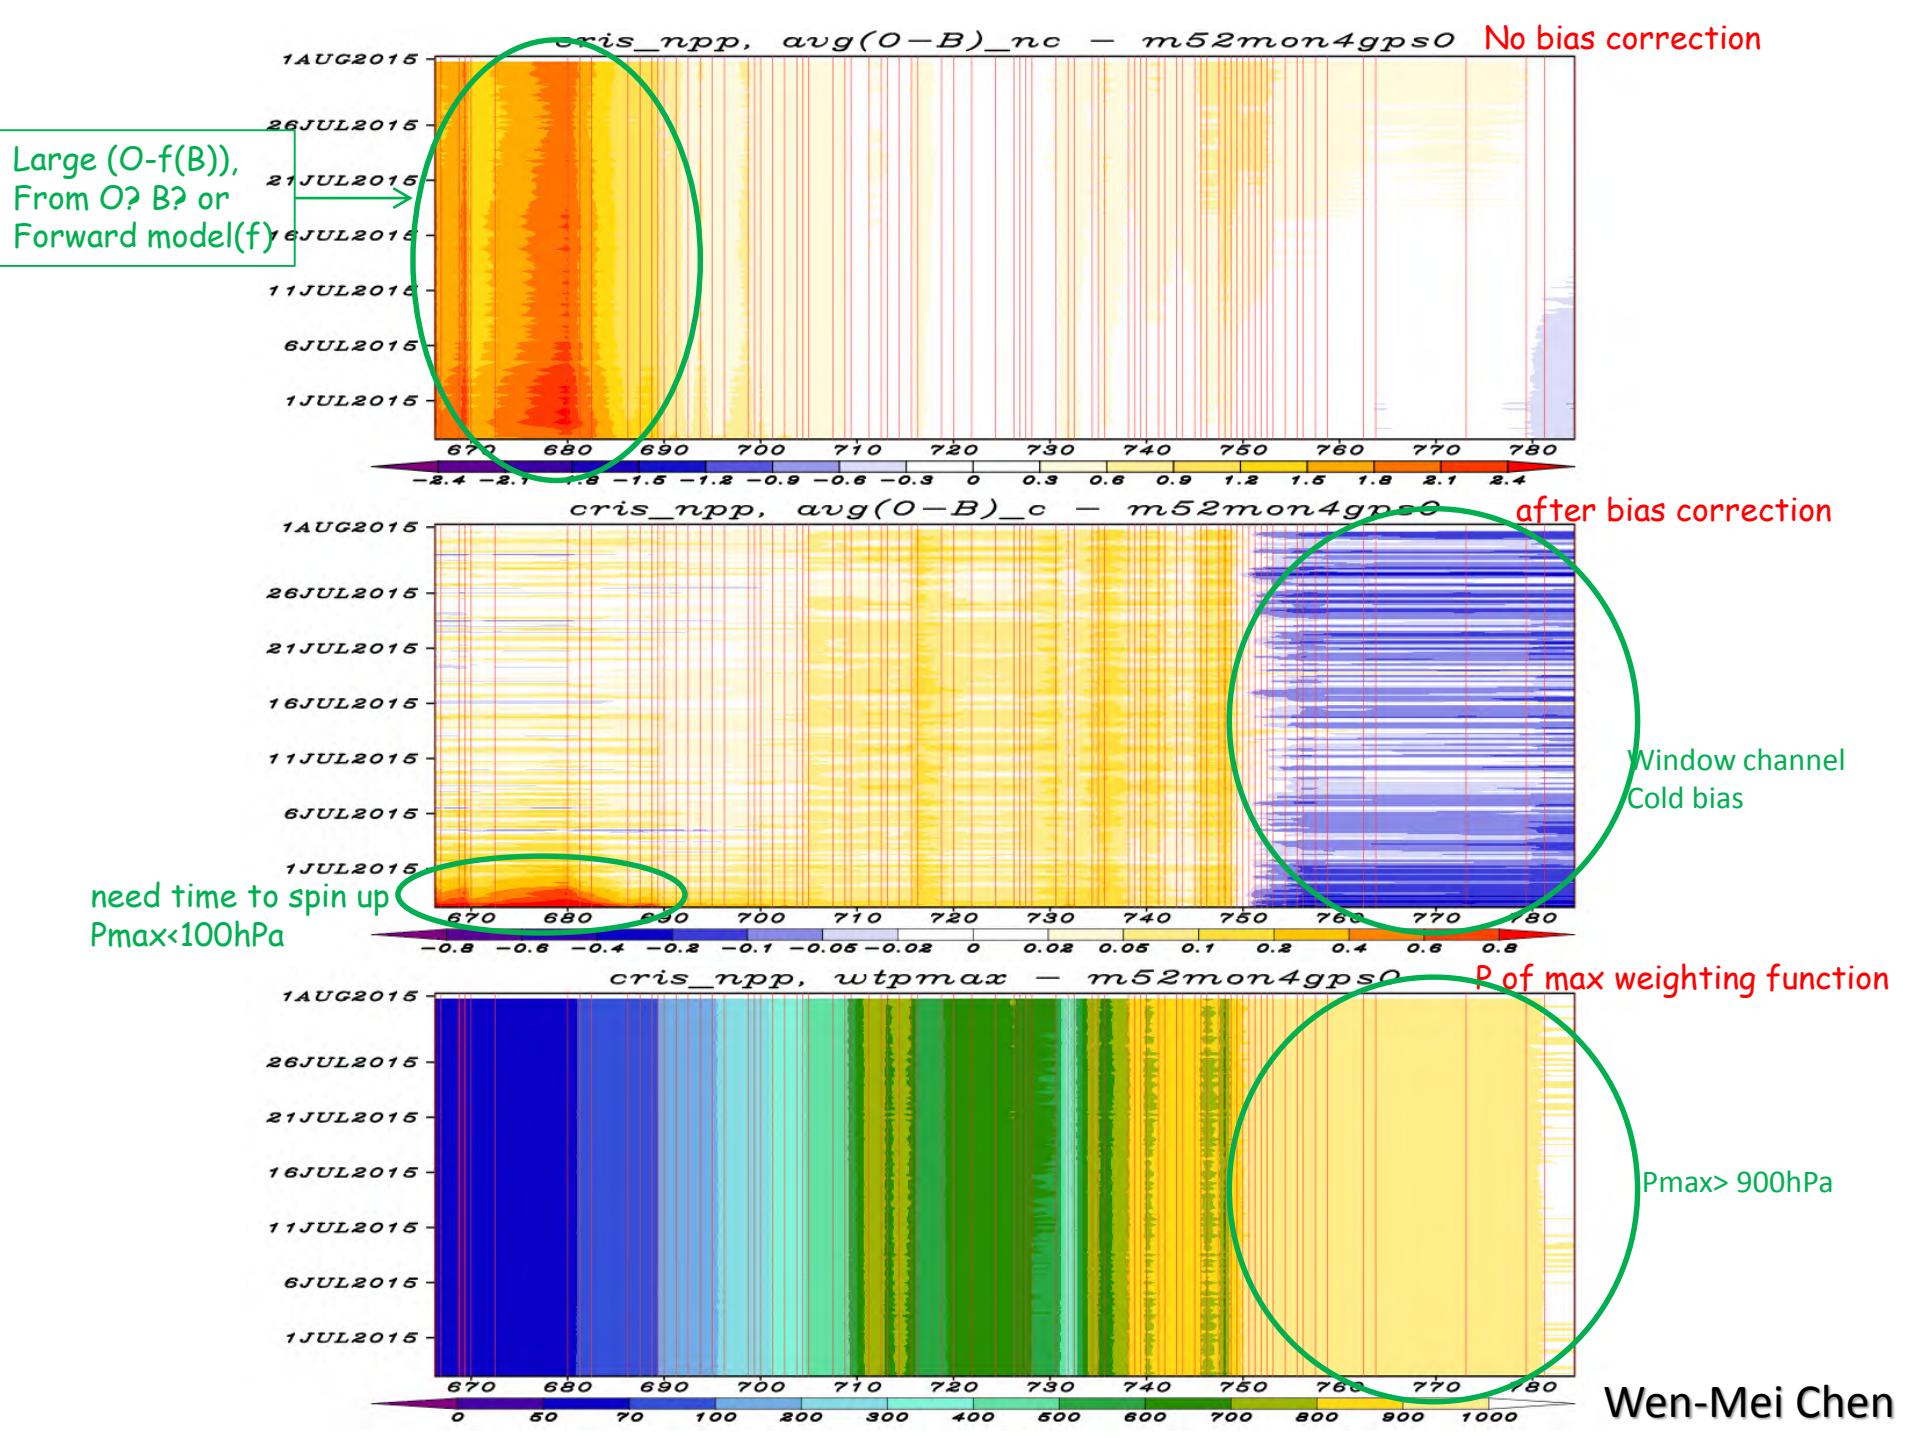

➤ start from 15062700
BIN from -5 ~ 5 with interval=0.1

(O-B)_nc : (O-B) with no bias correction

(O-B)_c : (O-B) with bias correction

assimilated count : count of assimilated radiance observation

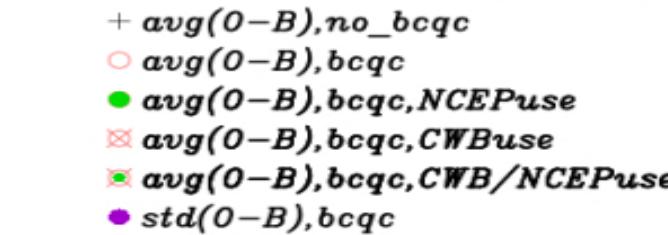

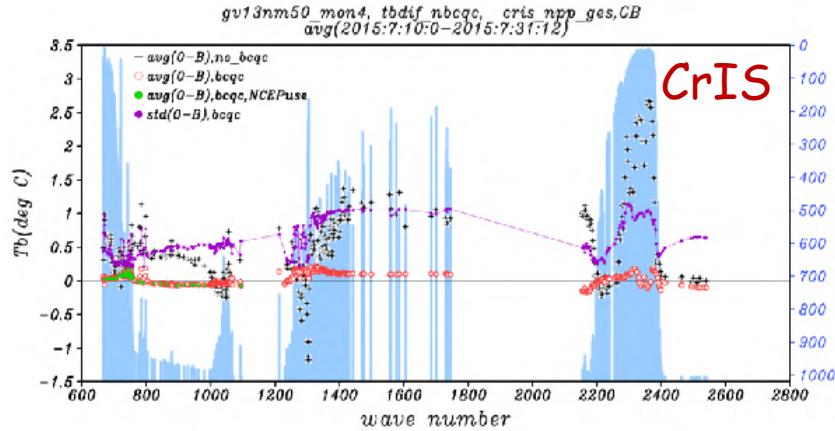

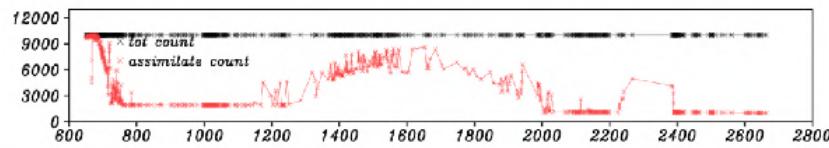

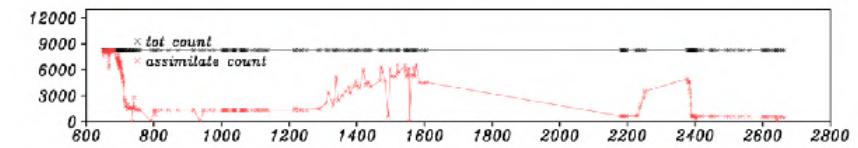

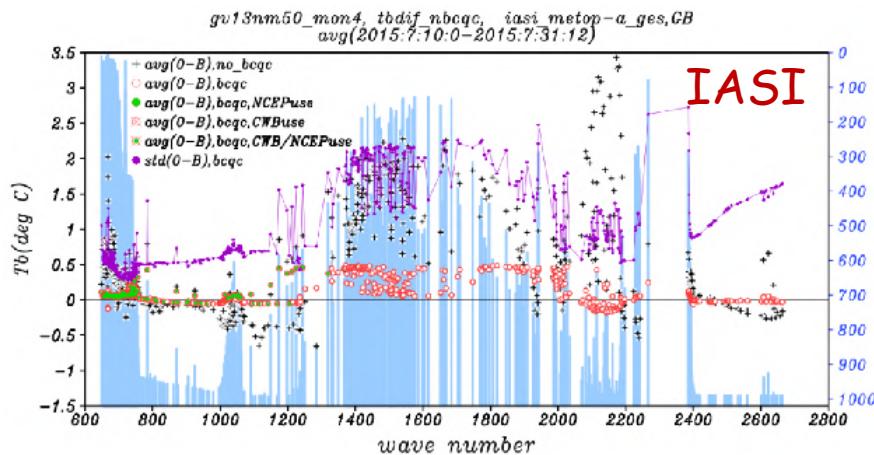

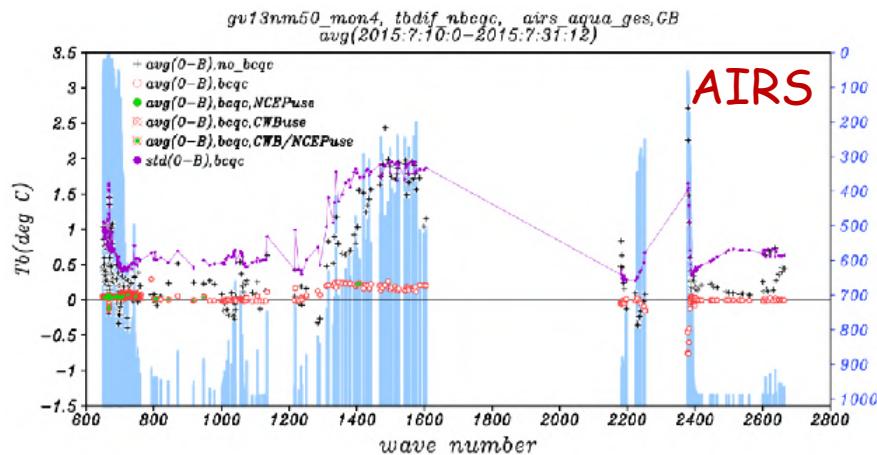

Wen-Mei Chen

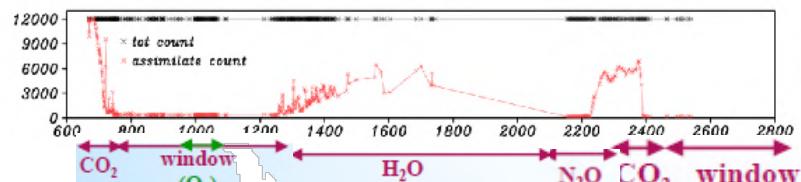

CrIS quality by CWBGFS 6hrs forecast
Compare with AIRS and IASI

AIRS/IASI/CrIS data quality - comparison with CWBGFS background

Average : 15071000-15073112

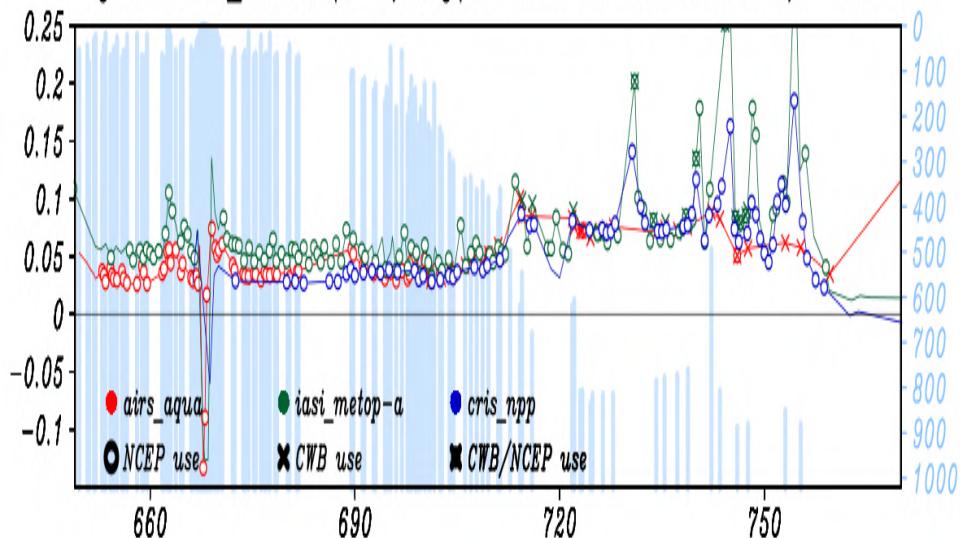

pressure level at peak of weighting

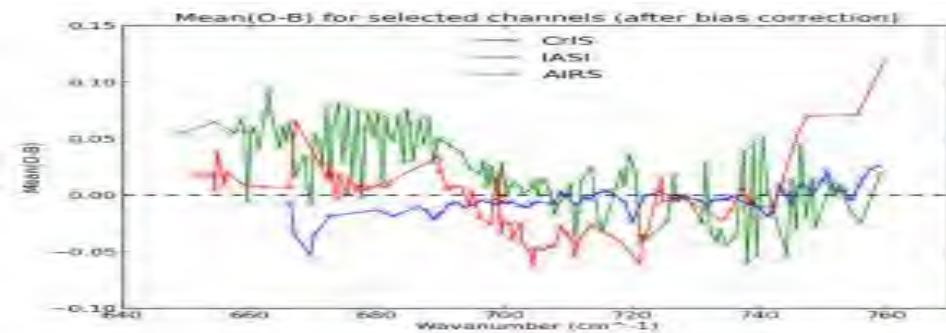

→ avg (O-B) =>0 for channels NCEP assimilated
=> experiment m52gps0crs1

AIRS/IASI/**CrIS** data quality - comparison with CWBGFS background
for LW CO₂ /Temperature channels, Average : 15071000-15073112

gv13nm50_mon4, (0-B),avg(2015:7:10:0-2015:7:31:12) - GB

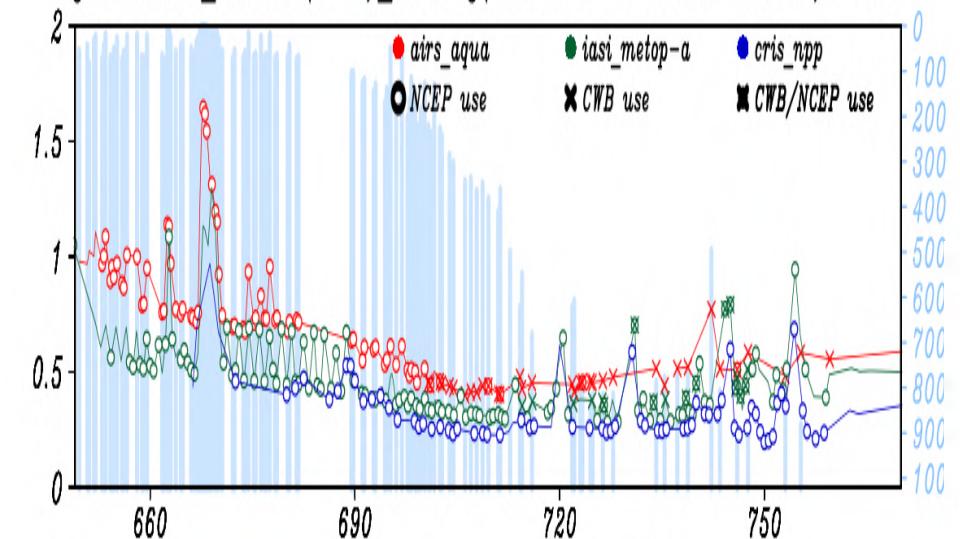

UK

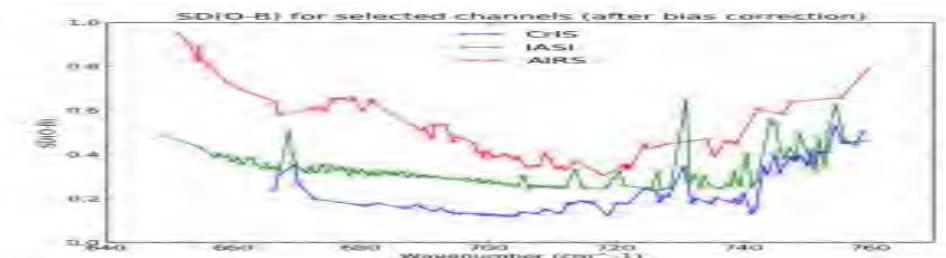

- Bias corrected data aggregated over a 3-month period.

gv13nm50_mon4, (0-B)_std,avg(2015:7:10:0-2015:7:31:12) - GB

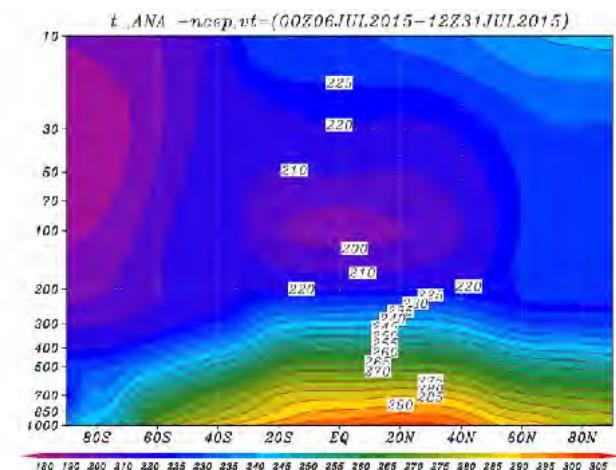

- Very small residual biases
- Unusual negative bias at low wavenumber (upper-level sounding channels)
- O-B as low as 0.15K in some channels, half that of IASI.

Impact of HIRS4_metop-A on CWB T511L60 system

- HIRS4 - High Resolution Infrared Radiation Sounder
- 20 spectral bands
 - one visible channel. IFOV 1.4°
 - 7 shortwave infrared (IR) channels. IFOV 1.4°
 - 12 longwave IR channels. IFOV 1.3°
- Vertical temperature profile and pressure from surface to 40 KM.
- orbital altitude 833KM.
- NOAA18、19，METOP-A/B
- Metop-A (2006/10 launched)

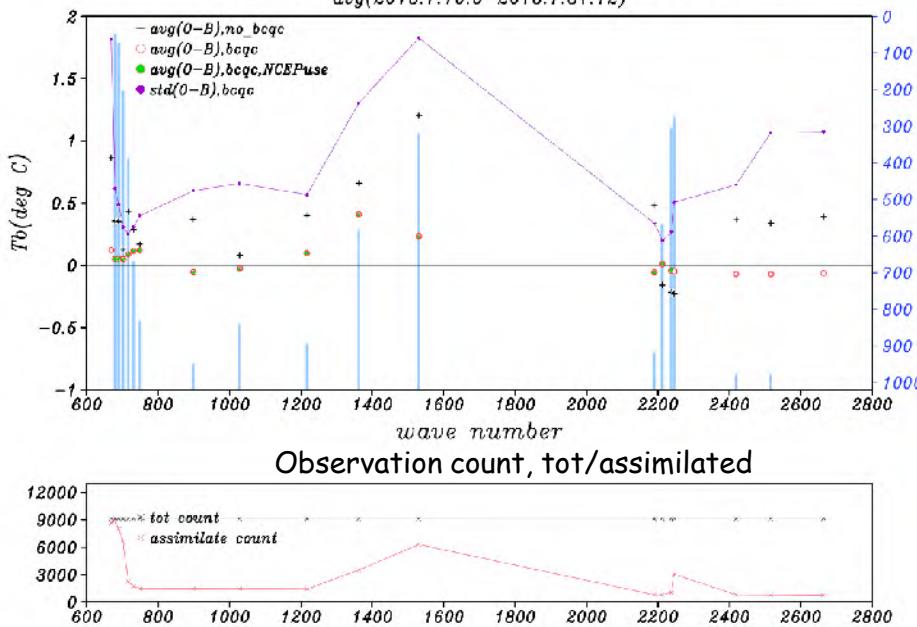

from : EUMETSAT website

Impact of HIRS4_metop-A on CWB T511L60 system

impact of HIRS4_metop-AT on T511L60 system(newGSI) - I

- Observations assimilated for control run (newGSI_opob-ec-gps): assimilated by operation except ECgrid and gpsro_ref (i.e. conventional observation + radiance(AMSU-A+IASI+AIRS+ATMS))
- GSI : new GSI (NCEP 1605 operated)
- GFS system : T511L60 (gfsv5.2)
- experiment period : 15062700-15073112
verified preiod : 15070200-15073112 (by own analysis)
- results :
 - N. Hemisphere : slightly negative impact for day5 forecast.
 - S. Hemisphere : neutral

experiment	description
newGSI_opob-ec-gps	newGSI, no gps_ref
newGSI_opob-ec-gps+HIRS4_mtA	same as newGSI_opob-ec-gps with HIRS4_metopA obs assimilated (temperature channels : chn3,4 and 14,15,16 assimilated)

impact of HIRS4_metop-Aq on T511L60 system(newGSI) - I

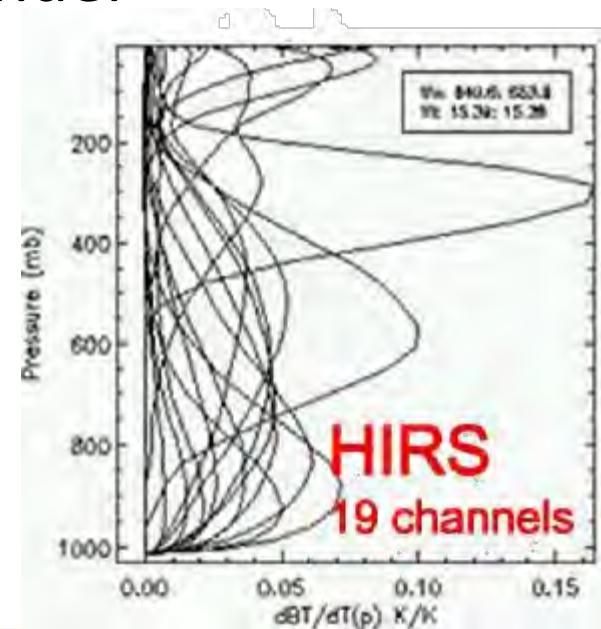

- Observations assimilated for control run (newGSI_opob-ec-gps): assimilated by operation except ECgrid and gpsro_ref (i.e. conventional observation + radiance(AMSU-A+IASI+AIRS+ATMS))
- GSI : new GSI (NCEP 1605 operated)
- GFS system : T511L60 (gfsv5.2)
- experiment period : 15062700-15073112
verified preiod : 15070200-15073112 (by own analysis)
- results :
neutral

experiment	description
newGSI_opob-ec-gps	newGSI, no gps_ref
newGSI_opob-ec-gps+HIRS4_mtAq	same as newGSI_opob-ec-gps with HIRS4_metopA obs assimilated (moisture channels : chn10,11,12 assimilated)

Impact of MHS on CWB T511L60 systemnewGSI (exp m52gps0mhs, satellite n18/n19/metop-a/metop-b)

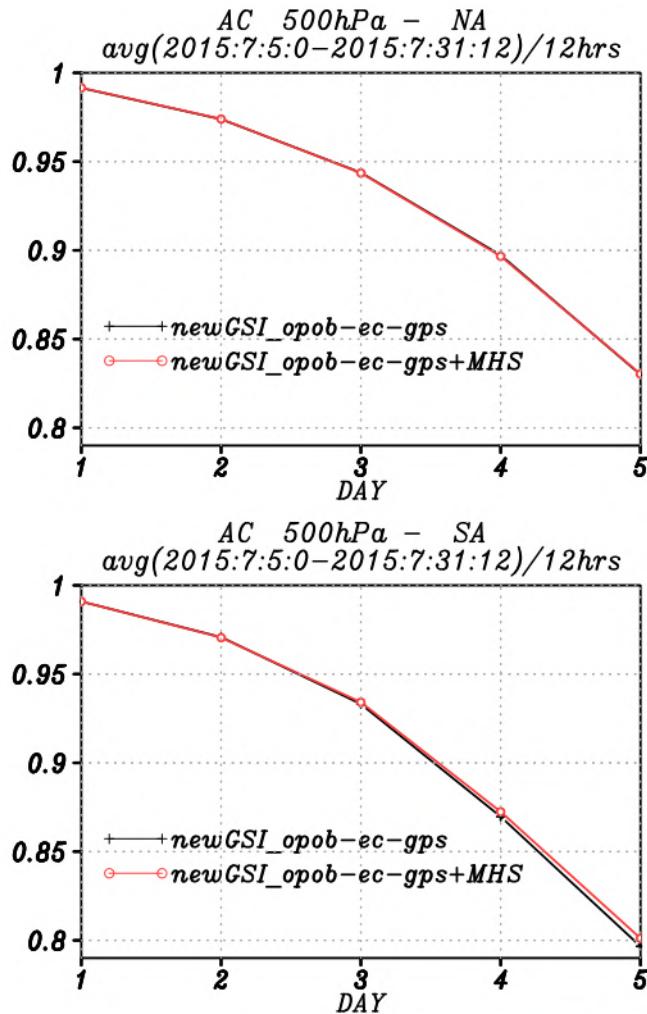

- MHS - The Microwave Humidity Sounder
- cross-track scanning
 - five-channel microwave
 - full-power radiometer
 - operating in the 89 to 190 GHz region
- $\pm 49.44^\circ$ from the nadir
- Width of swath : $\pm 1089\text{km}$
- IFOV size at Nadir : 16 km

from : EUMETSAT website

impact of MHS on T511L60 system(newGSI) – I

Summer month(1507)

- Observations assimilated for control run (newGSI_opob-ec-gps): assimilated by operation except ECgrid and gpsro_ref (i.e. conventional observation + radiance(AMSU-A+IASI+AIRS+ATMS))
- GSI : new GSI (NCEP 1605 operated)
- GFS system : T511L60 (gfsv5.2)
- experiment period : 15062700-15073112
verified preiod : 15070500-15073112 (by own analysis)
- results :
neutral

experiment	description
newGSI_opob-ec-gps	newGSI, no gps_ref
newGSI_opob-ec-gps+MHS	same as newGSI_opob-ec-gps with MHS obs assimilated (noaa18/noaa19/metop-a/metop-b)

小結

- 使用GPSRO偏折角在36組成員3d EnVar下南北半球positive，但熱帶地區高度場RMSE則為negative
- CrIS需要spin up之時間，資料品質相對於IASI與AIRS較穩定，在pure 3dvar下對預報為中性略positive
- HIRS使用水氣頻道，在pure 3dvar下對預報為中性，溫度頻道則北半球中性略negative
- MHS在pure 3dvar下對預報為中性

Radiance data monitor

channel 14 of the Aqua AMSU-A

from : Earth System Assimilation Section
ECMWF working group

結論

- 衛星資料數量占約90%，偏差訂正，衛星頻道監控十分重要(子茂)
- 衛星資料至少需要半個月 spin up
- GPSRO、臭氧觀測，為衛星偏差訂正與資料稀疏化重要依據
- 未來工作
 - 衛星風使用
 - COSMIC-2 QC process
 - 尺度相依權重(登舜)
